Copper and bus bar bending

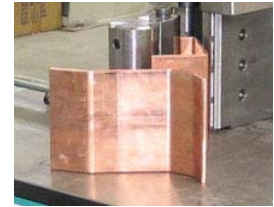

STIERLI experts in the field of switchgear and electrical industries.

The bending machines are mostly used with NC or CNC controls fitted to a high number and precision is achieved.

Convince yourself of the diversity of the bending parts:

bending of copper bus bars

bus bars up to 300mm height

Aluminium bus bar

bending of round stock copper

edgewise bending

edgewise copper bending

Punching and stamping of copper

radial bending of copper

bent after punching

step forming tool

welding electrode bending
